PERLITE

PREMIUM MICROCELLULAR FILLER

What is Perlite?

Perlite is a natural volcanic mineral that is widely used in cosmetic and personal care products. It is processed into a fine, lightweight powder that provides excellent oil absorption and gentle exfoliation properties. Due to its soft texture and porous structure, Perlite helps improve skin feel, control excess oil, and enhance the performance of cosmetic formulations.

Key Features

- > 100% Natural made with Perlite Ore
- > Higher Oil & Sweat Absorption
- > Dual Function - Absorption + Exfoliant
- > Lower Density
- > Reduced Over - Drying Effect
- > Extremely lightweight due to high expanded porous particles
